

## Fund Goals

- » The Growth Fund seeks long-term capital appreciation.
- » The Fund invests in what Yorktown considers the most compelling domestic, international and emerging market growth companies, regardless of market capitalization or sector.
- » Yorktown focuses on companies in attractive industries located in countries with growing GDP and a stable political environment.
- » The Growth Fund is generally appropriate for investors who place a priority on growing capital.

## Characteristics

Assets \$56,056,722  
 Benchmark<sup>^</sup> MSCI World  
 Morningstar Category<sup>+</sup> World Large Stock Growth

## Notes & Important Disclosures

You should carefully consider the investment objectives, potential risks, management fees, and charges and expenses of the Fund before investing. The Fund's prospectus contains this and other information about the Fund, and should be read carefully before investing. You may obtain a current copy of the fund's prospectus by calling 1-800-544-6060.

<sup>7</sup> Alpha and Beta measured against Morningstar World Large Stock Growth Category. Alpha is a measure of risk of an investment relative to the best match market index. Beta is the sensitivity of a stock's returns to the returns on the best match market index.

As of the May 31, 2022 prospectus, Fund total operating expense ratios are: Class A, 1.37%; Class L, 2.37%; Institutional Class, 1.37%. In the interest of limiting expenses of the Fund, the Adviser has entered into a contractual expense limitation agreement with the Trust, effective May 31, 2022, so that the Fund's ratio of total annual operating expenses is limited to 0.99% for Class A Shares, 1.99% for Class L Shares, and 0.99% for Institutional Class Shares until at least May 31, 2023.

An investment in an exchange-traded fund (ETF) generally presents the same primary risks as an investment in a conventional fund (i.e., one that is not exchange traded) that has the same investment objectives, strategies, and policies. The price of an ETF can fluctuate up or down, and the Fund could lose money investing in an ETF if the prices of the securities owned by the ETF go down. In addition, ETFs may be subject to the following risks that do not apply to conven-

tional funds: (i) the market price of an ETFs shares may trade above or below their net asset value; (ii) an active trading market for an ETFs shares may not develop or be maintained; or (iii) trading of an ETFs shares may be halted if the listing exchanges officials deem such action appropriate, the shares are de-listed from the exchange, or the activation of market-wide "circuit breakers" (which are tied to large decreases in stock prices) halts stock trading generally.

The Morningstar Rating for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life sub accounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for

120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

A Fund's direct or indirect investments in foreign securities, including depositary receipts, involve risks not associated with investing in U.S. securities that can adversely affect the Fund's performance. Foreign markets, particularly emerging markets, may be less liquid, more volatile and subject to less government supervision than domestic markets.

Small- and Mid-Cap investing involve greater risk not associated with investing in more established companies, such as greater price volatility, business risk, less liquidity and increased competitive threat.

Funds whose investments are concentrated in a specific industry or sector may be subject to a higher degree of market risk than funds whose investments are diversified. In addition, the Fund may be subject to specific risks of the technology sector, such as obsolescence.

The MSCI World Index is a free float-adjusted market capitalization index that is designed to measure global developed market equity performance. Investors cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges.
